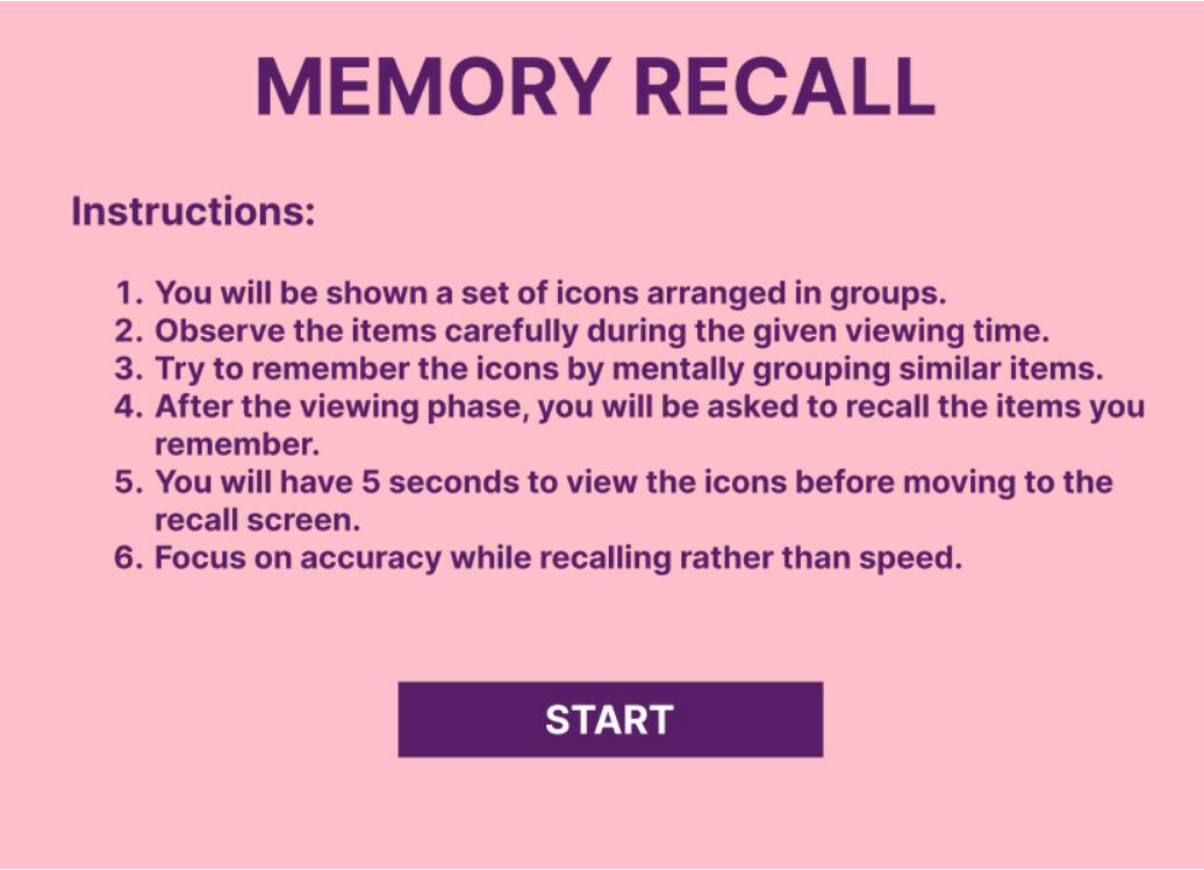
EXPERIMENT -1

NAME: YUGESH E T

ROLL NO: 240701613

SUBJECT: USER INTERFACE DESIGN

SLIDE 1:



This slide represents the initial design layout created using Figma. It showcases the basic structure, including the arrangement of UI elements, color scheme, and typography. The purpose of this design is to provide a clear visual hierarchy and an intuitive user experience. The layout focuses on simplicity and usability, ensuring that users can easily navigate through the interface.

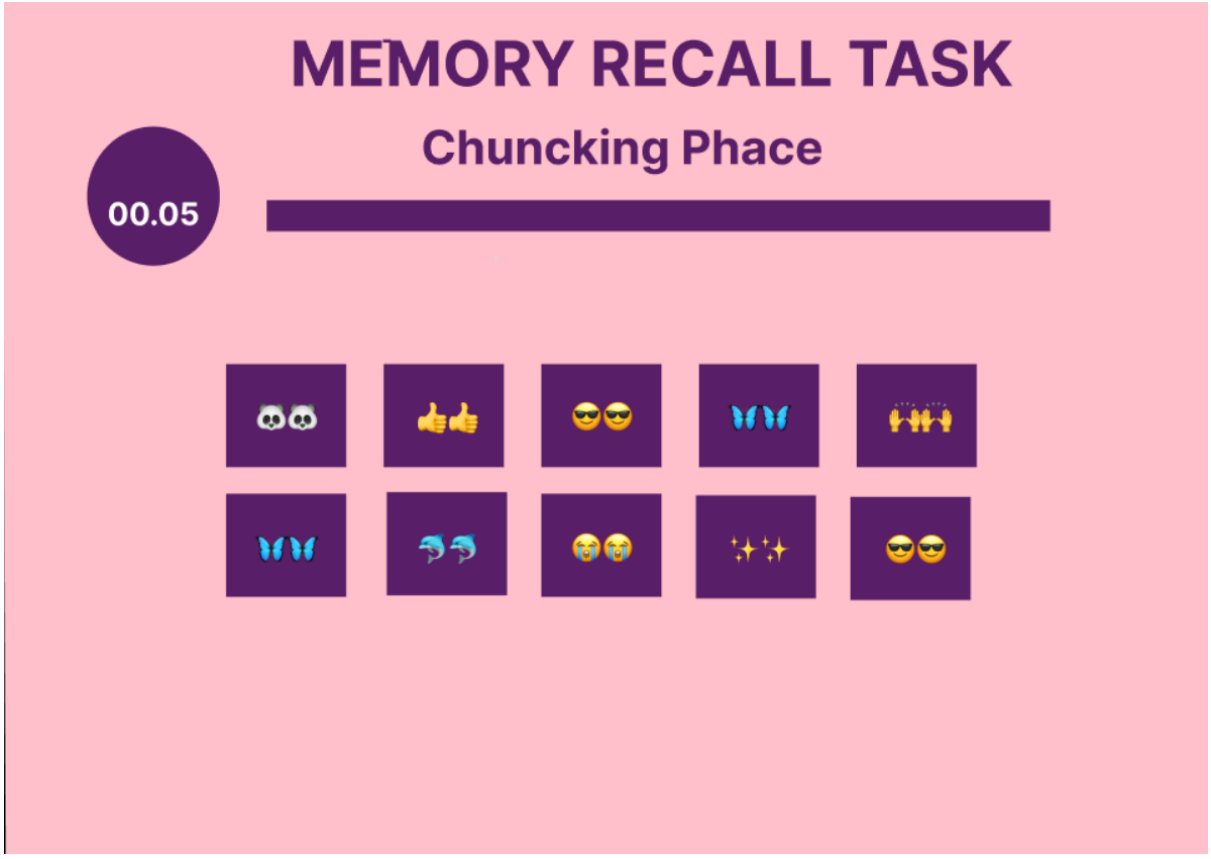
SLIDE 2:



This slide demonstrates the interactive prototype of the design. It highlights how users can interact with different components such as buttons, menus, and navigation elements. The prototype helps in understanding the user flow and overall functionality of the application. It acts as a bridge between static design and real-time user experience.

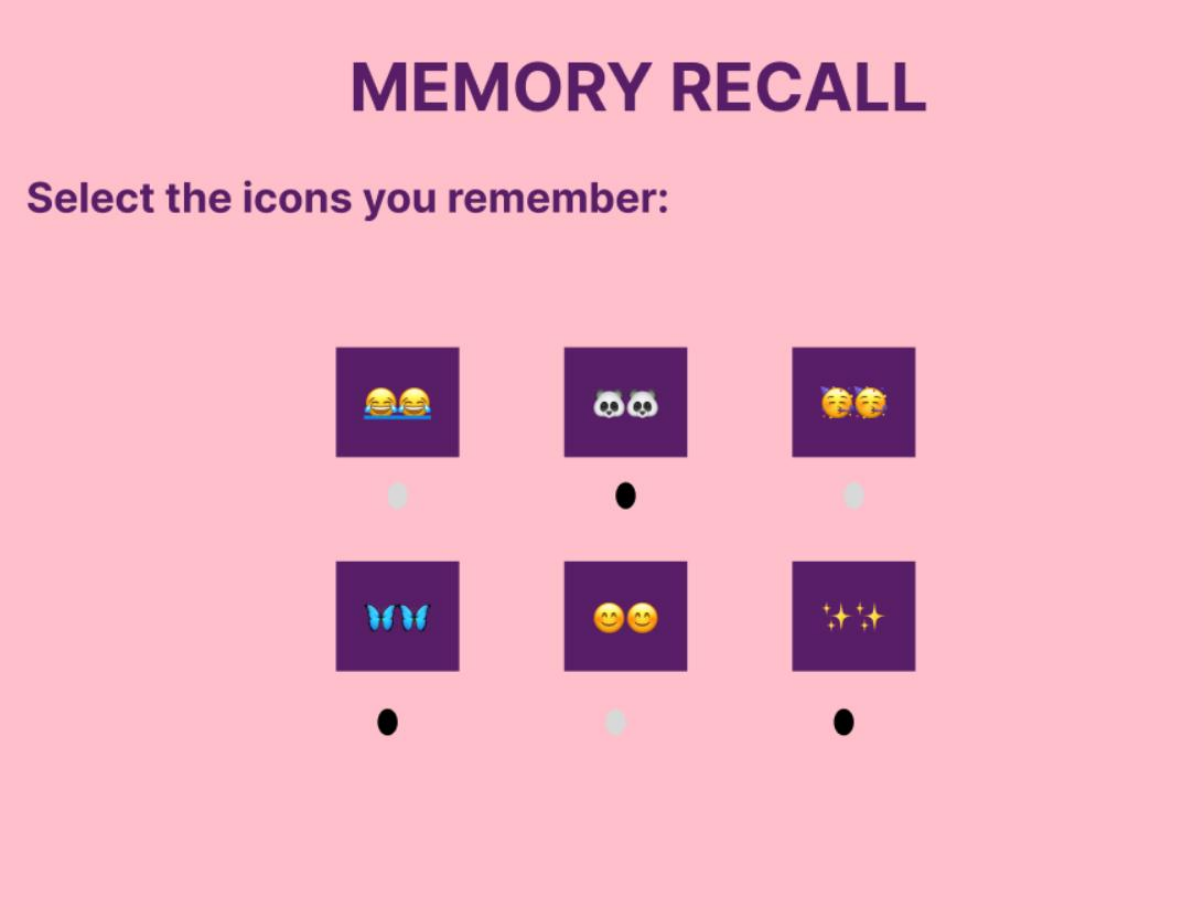
SLIDE 3:



This slide explains the navigation flow within the application. It shows how users move from one screen to another and how different sections are connected. The design ensures smooth transitions and logical flow, making it easy for users to complete tasks efficiently. Proper navigation enhances usability and improves user satisfaction.

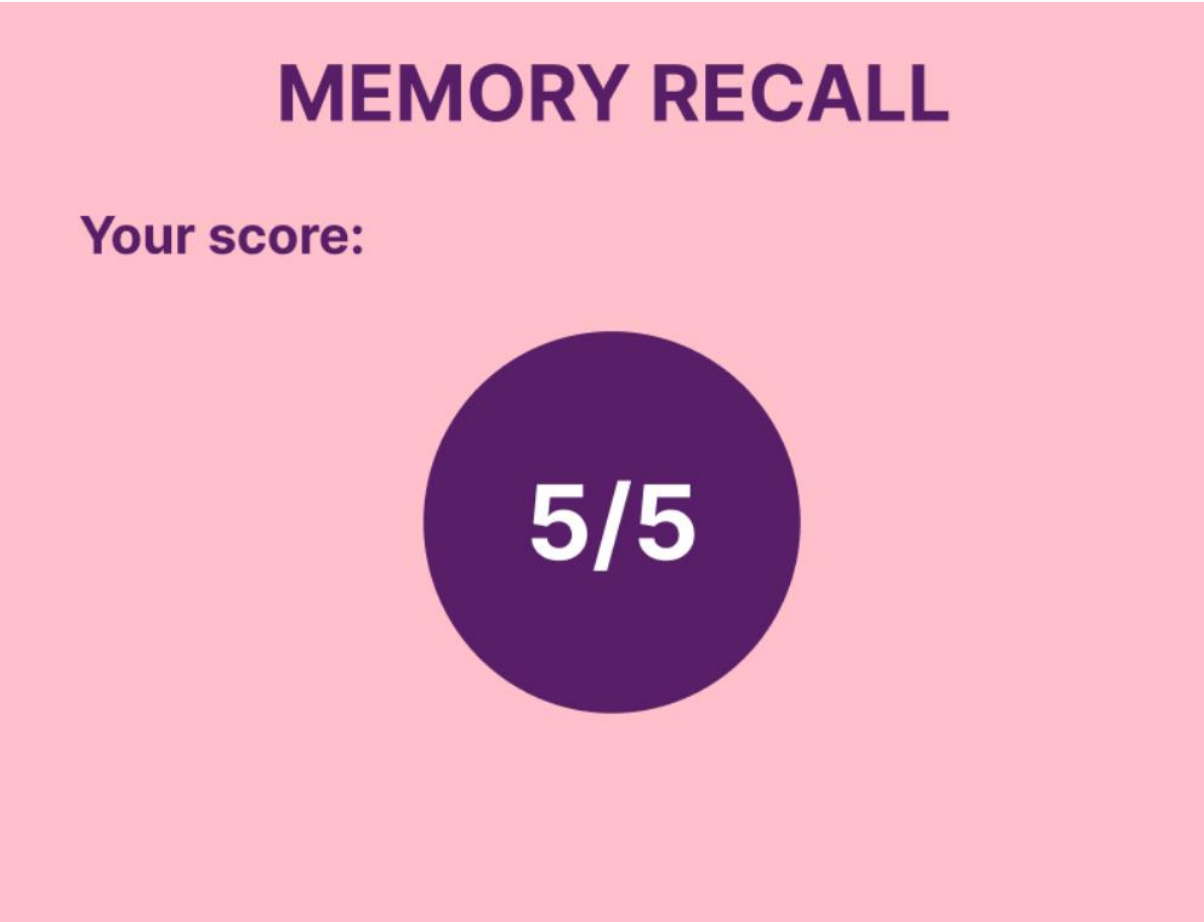
SLIDE 4:



This slide presents the final version of the UI design after improvements and refinements. It reflects a user-friendly interface with consistent design elements and optimized layout. The final prototype ensures better accessibility, responsiveness, and overall user experience. This concludes the design process from concept to interactive prototype.
